

Arif Ashraf

Bengaluru, Karnataka — Mail — +91 9797012112 — LinkedIn — GitHub — Portfolio

Summary

Software developer with a strong foundation in Java, Data Structures Algorithms, and backend development. Skilled in building RESTful applications using Spring Boot, Django, and MySQL. Seeking a Software Development Engineer role to build scalable applications and backend systems.

Education

SEA College of Engineering and Technology (SEACET), Bengaluru

2022 – 2026

BE in Computer Science and Engineering

CGPA: 8.6/10

Skills

Languages: Java, Python, C++

Frameworks & Backend: Spring Boot, Django, JWT, WebSocket, REST APIs, React

Databases: PostgreSQL, MySQL, MongoDB

Web Technologies: HTML, CSS, JavaScript

Tools & Platforms: Git, GitHub, GitHub Actions, AWS EC2, Nginx

Experience

Netpy Technologies — Software Developer Intern

Oct 2025 – Present

- Developed and maintained backend services in Django for a cloud-based e-commerce platform used across core order workflows.
- Built and documented 15+ REST APIs for authentication, catalog, and order processing modules.
- Implemented OTP login and RBAC across 3 user roles (admin, operations, customer support).
- Optimized critical inventory and transaction queries, reducing API response time by approximately 25%.
- Delivered features through PR-based Agile cycles, contributing to weekly release milestones.

Projects

DPI Engine — Deep Packet Inspection System

[GitHub](#)

C++ — Networking — PCAP Parsing — Multithreading — TLS

- Built a Deep Packet Inspection engine to parse raw PCAP captures and perform flow-level traffic analysis.
- Implemented custom parsers for 4 protocols: Ethernet, IPv4, TCP, and UDP.
- Extracted TLS SNI from HTTPS Client Hello packets to enable domain-level traffic identification.
- Developed a rule engine supporting 3 enforcement layers: IP, application, and domain blocking.
- Designed a multithreaded processing pipeline with thread-safe queues.

Real-Time Chat Application

[GitHub](#) | [Live](#)

Java — Spring Boot — WebSocket — REST APIs

- Developed and deployed a real-time chat backend using Spring Boot and WebSocket messaging.
- Implemented bidirectional communication with sub-second message delivery in local testing.
- Designed 10+ REST APIs for user management, chat rooms, and message persistence.
- Built backend flows supporting 50+ concurrent user sessions during functional load tests.

Client Project — Gill Organics

[Website](#)

Django — E-commerce Backend — REST APIs

- Developed backend modules for product catalog, authentication, and order lifecycle workflows.
- Built 12+ REST endpoints for product listing, category management, cart, and order placement.
- Improved checkout and order-status workflows, reducing manual support dependency for order tracking.
- Optimized inventory and transaction queries, improving consistency and response times under peak usage.
- Supported integration, QA fixes, and release cycles to deliver production-ready features on schedule.
- Added validation and error-handling logic to improve API reliability and reduce failed order operations.

Achievements

- 2nd Prize — College Hackathon (Innovation Category)
- Solved 200+ DSA problems in Java/C++ across arrays, strings, sets, linked lists and maps.
- TCS TechBytes — Reached the Semifinalist stage in a national-level technical competition focused on problem-solving and coding aptitude.
- Selected for Inter-College Round of SAP Labs NEXTGRID Hackfest
